

MULTILIZER® 5.1

Fact Sheet: 01/07/2002

MULTILIZER® 5.1 localizes Windows software, Mobile and Internet software, databases and other content.

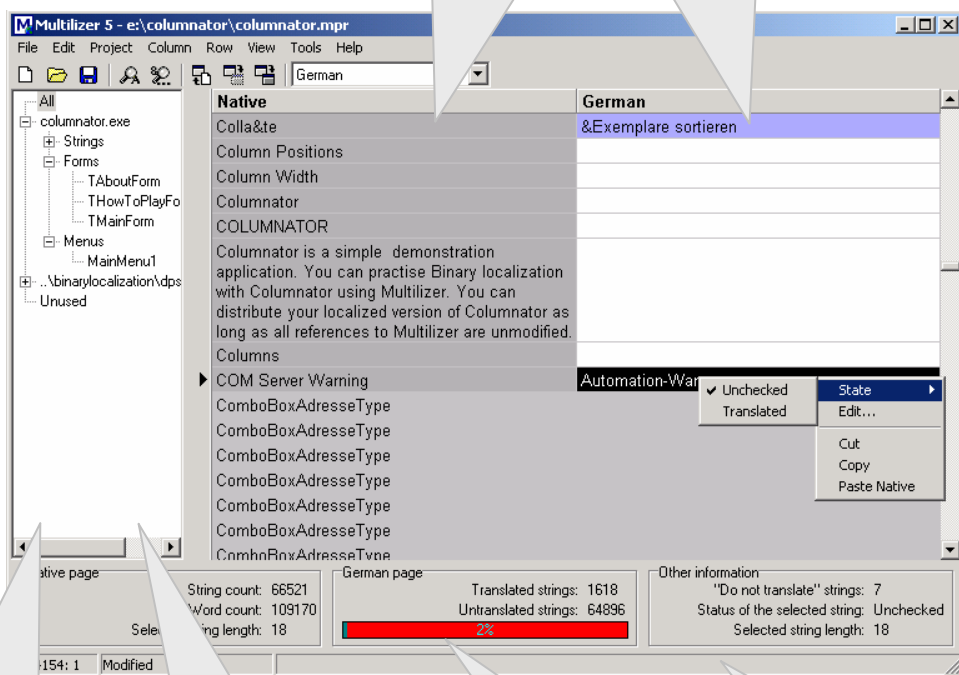

- Create localized or even multilingual software versions of your Windows, Mobile & Internet software.
- Localize any accompanying data: XML, databases, etc.
- One Multilizer localization project can contain any number of localizable files.
- Statistics keeps you updated of project status.
- Wizards automate time-consuming tasks.
- Import, Export and Exchange Wizards help to efficiently share data.

Share translation work

Create Localization Kits of project translations and send them to translators.
The kit includes free **MULTILIZER® 5.1 Translator Edition™** for editing translations.

Re-use translations

Use private or shared Translation Memory database.
Import translations from previous projects.
TMX and multiple glossary file formats supported.

Localize any software and content

Maintain any number of Windows software, Mobile/Internet software, and Content formats in one Multilizer project.

Version control

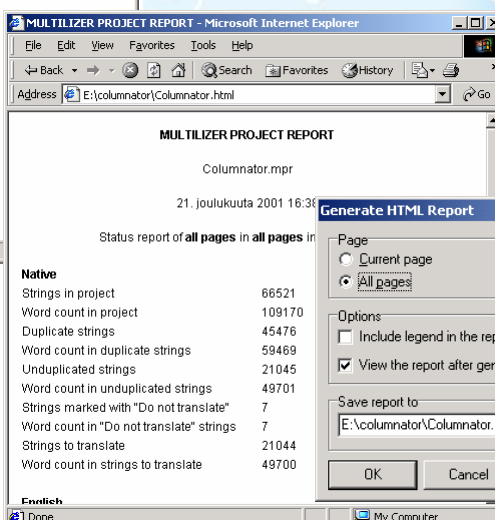

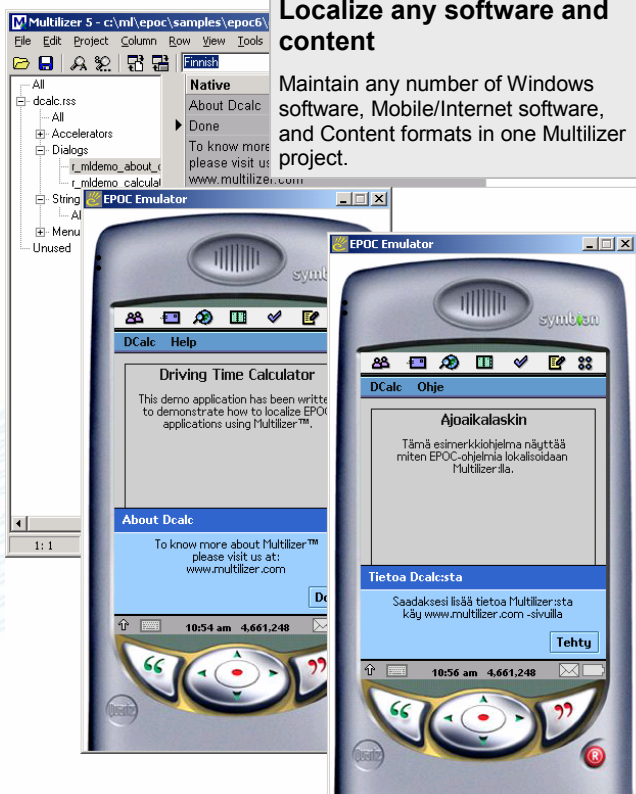

Automatically detect changes in original software or content.
Minimize localization overhead with new or updated versions.

Statistics

Get real-time status information.
Create comprehensive statistics of the project.

Security

Localizable data is isolated from data structures.

MULTILIZER® 5.1 Features

MULTILIZER® 5.1 includes features that boost the productivity on all supported platforms.

The entire localization project can be completed with MULTILIZER® 5.1. For QA and translation purposes, there are separate editions. See right margin for more info on the usage.

Glossary Import Wizard: import database fields, configurable text files, etc.	✓	✓	✓
Align – get translations from localized software.	✓	✓	✓
QA – Quality Assurance			
Comprehensive pseudo translation features.	✓	✓	✓
Cover/expand/minimum tests for UI elements.	✓	✓	✓
Run localized software directly from MULTILIZER.	✓	✓	
Run localized mobile software through emulators.	✓	✓	
Full control over UI/content strings to localize	✓		
o Lock/unlock feature at translation unit level	✓		
o Include/exclude tags to localize in XML and derivatives.	✓		
o Include/exclude objects/components/controls in any software projects.	✓		
o Globally exclude translation units by content	✓		

MULTILIZER® 5.1 –
Three steps to localize
software and content.

① Create project:

Use **MULTILIZER® 5.1** to create a localization project. MULTILIZER automatically extracts the strings from software and content and stores them to the project file.

② Translate

Translations can be packaged into a Localization Kit, which can be sent for translation.

The kit includes free **MULTILIZER® 5.1 Translator Edition** for editing translations.

③ Build localized versions

Once the translations are ready, localized versions of the software are built easily with a click of a mouse.

This can be done either with **MULTILIZER® 5.1** or with **MULTILIZER® 5.1 Translator Edition Pro**.

Distribution Media:
CD-ROM, On-line

System requirements for MULTILIZER application:
Windows 95, Windows 98, Windows ME, NT 4.0, Windows 2000, XP .
